

WE APOLOGIZE IN ADVANCE FOR MAKING YOUR PATIENTS OVERSLEEP

With its new durable, lightweight design, the ComfortFull™ 2 makes it easier than ever for patients who breathe through the mouth to comply with their therapy and get a good night's rest. And that's one more reason you can fully count on the Comfort Series to help you fit 100% of your patients 100% of the time.

ComfortFull™ 2

ComfortFull™ 2

More Comfort. More Durability.

With the revolutionary ComfortFull™ mask, we improved the lives of patients whose therapy was compromised by mouth breathing. Now, we've perfected the original by creating a more durable full-face mask with increased seal and comfort: ComfortFull 2.

The outer layer of the ComfortFull 2's dual-flap cushion features a soft, polished surface. This improves comfort and provides a more reliable seal for better therapy delivery. Plus, the redesigned cushion and faceplate are now just one lightweight piece.

Additional product advancements include an entrainment valve with a new split washer for better swiveling of the elbow and a more secure and standardized connection. Plus, the ComfortFull 2 features a StabilitySelector™ that's easier to use.

With a full range of features, ComfortFull 2 provides you with the value of increased patient compliance, less callbacks or complaints, and a wide range of adjustability that allows for fewer sizes and less inventory. Translation: it's the best option available for full-face masks. Which is good for your patients. And great for your business.
